

Onakoya Modupe

Frontend Developer

✉ onakoyamodupe0@gmail.com • [GitHub](#) • [LinkedIn](#)

Professional summary

Frontend Developer with 3 years of experience building responsive, user-friendly web applications with clean code and scalable architecture. Skilled in creating engaging interfaces and seamless user experiences while considering performance, accessibility, and SEO. Passionate about solving complex problems and building maintainable products that deliver real user and business value.

Professional Experience

Terrahq

January 2025 – April 2025

Software development intern

Front-end Development Team

- Collaborated with senior developers to design and implement user-centric features, translating business requirements into functional enhancements that met user needs and expectations.
- Debugged and resolved cross-browser and cross-device layout issues across different browsers and devices.
- Participated in code reviews adopting best practices for clean, maintainable and scalable front-end code.
- Converted UI/UX designs into pixel-perfect, responsive web pages with strong attention to detail and performance.

Hng

June 2024 - August 2024

Software development intern

Front-end Development Team

- Promoted a collaborative team environment that facilitated knowledge sharing and idea generation among 2 interns, driving efficient task coordination and project success

- Partnered with a UI designer to develop a dynamic, responsive e-commerce website that delivered a seamless user experience, leveraging design expertise to inform technical implementation.

Technical skills

Languages: JavaScript, TypeScript, HTML5/CSS3

Frameworks & Libraries: React, Next.js

CSS Frameworks: Tailwind CSS, Bootstrap

State Management: Zustand

Data Fetching & Server State: TanStack Query

Forms & Validation: React Hook Form, Zod

Backend & Database: Supabase

Animation: Framer Motion

Tools & Others: Git, GitHub, Vercel, VS Code, Figma

Selected Work

My Portfolio | [View Live](#)

Solara Energy – Solar E-commerce Platform | [View Live](#)

Personal project - Next.js · TypeScript · Supabase · Tailwind CSS

- Developed a full-stack solar energy platform with Next.js and TypeScript, featuring a real-time bill savings calculator that computes monthly savings, payback periods and 20-year ROI based on user electricity consumption — with results automatically persisted to a Supabase PostgreSQL database.
- Implemented end-to-end authentication using Supabase Auth with email/password login, protected routes via Next.js middleware, and a personalised user dashboard that tracks calculation history, saved products, quote requests and payment plans — with role-based access control separating public and authenticated experiences. Implemented smooth animations and interactive UI elements to enhance the user experience.
- Built a dynamic product catalogue using Next.js dynamic routing (`[slug]`), serving four product lines (Solar Panels, Inverters, All-in-One Systems, Street Lights) from a single page component — featuring variant selection, technical

specifications, an interactive payment calculator supporting both full payment and instalment plans, and an integrated FAQ section.

Sneak Lovers — Multi-Brand Footwear E-commerce Platform | [View Live](#)

Personal Project - Reactjs · Tailswind CSS

- Developing a responsive e-commerce platform for a retail footwear store showcasing popular brands including **Nike, Adidas, and Puma**.
- Built reusable product and brand components to display products dynamically from structured product data.
- Implemented **product filtering, search, sorting, brand pages, collections, and dynamic product detail pages** using React Router.
- Implemented a **cart system with Context API** for sharing cart state across components.
- Implementing product discovery features including new arrivals, best sellers, search results, and price sorting.
- **Currently ongoing — checkout/payment and additional e-commerce functionality are still being developed**

Education

University of Abuja

January 2020 - February 2024

BSc. Microbiology

Career Goal

My long-term career aspiration is to advance into a senior front-end developer role and subsequently transition into a full-stack developer position, broadening my technical expertise and acquiring proficiency in back-end development.
